Accordion

```
gradio.Accordion(...)
```

Description

Accordion is a layout element which can be toggled to show/hide the contained content.

Example Usage

```
with gr.Accordion("See Details"):  
    gr.Markdown("lorem ipsum")
```

Initialization

Parameter	Description
<div>label</div> <div><i>str</i> <i>None</i></div> <div>default: None</div>	name of accordion section.
<div>open</div> <div><i>bool</i></div> <div>default: True</div>	if True, accordion is open by default.
<div>visible</div> <div><i>bool</i></div> <div>default: True</div>	

<div>elem_id</div> <div>str None</div> <div>default: None</div>	An optional string that is assigned as the id of this component in the HTML DOM. Can be used for targeting CSS styles.
<div>elem_classes</div> <div>list[str] str None</div> <div>default: None</div>	An optional string or list of strings that are assigned as the class of this component in the HTML DOM. Can be used for targeting CSS styles.
<div>render</div> <div>bool</div> <div>default: True</div>	If False, this layout will not be rendered in the Blocks context. Should be used if the intention is to assign event listeners now but render the component later.
