Group

```
with gradio.Group():
```
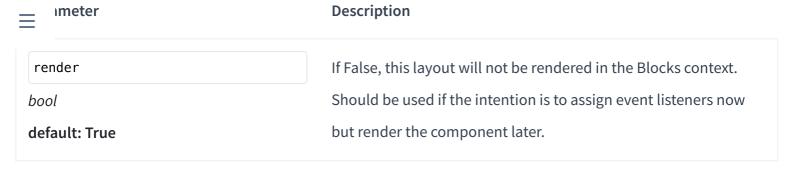

Description

Group is a layout element within Blocks which groups together children so that they do not have any padding or margin between them.

Example Usage

```python
with gr.Group():
    gr.Textbox(label="First")
    gr.Textbox(label="Last")
```

Initialization

Parameter	Description
`visible` *bool* **default: True**	If False, group will be hidden.
`elem_id` *str | None* **default: None**	An optional string that is assigned as the id of this component in the HTML DOM. Can be used for targeting CSS styles.
`elem_classes` *list[str] | str | None* **default: None**	An optional string or list of strings that are assigned as the class of this component in the HTML DOM. Can be used for targeting CSS styles.

render	If False, this layout will not be rendered in the Blocks context.
bool	Should be used if the intention is to assign event listeners now
default: True	but render the component later.
